

***How to Swap
Pointer
File DDS using
ChangeTex***

By: Deathbringer

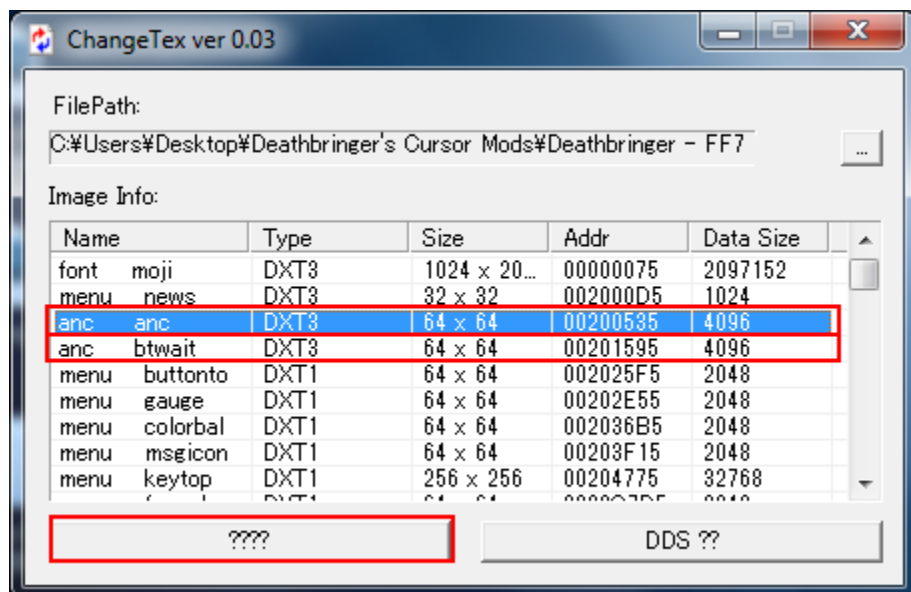

Step 1: Open ChangeTex and click “...” to search for the DAT

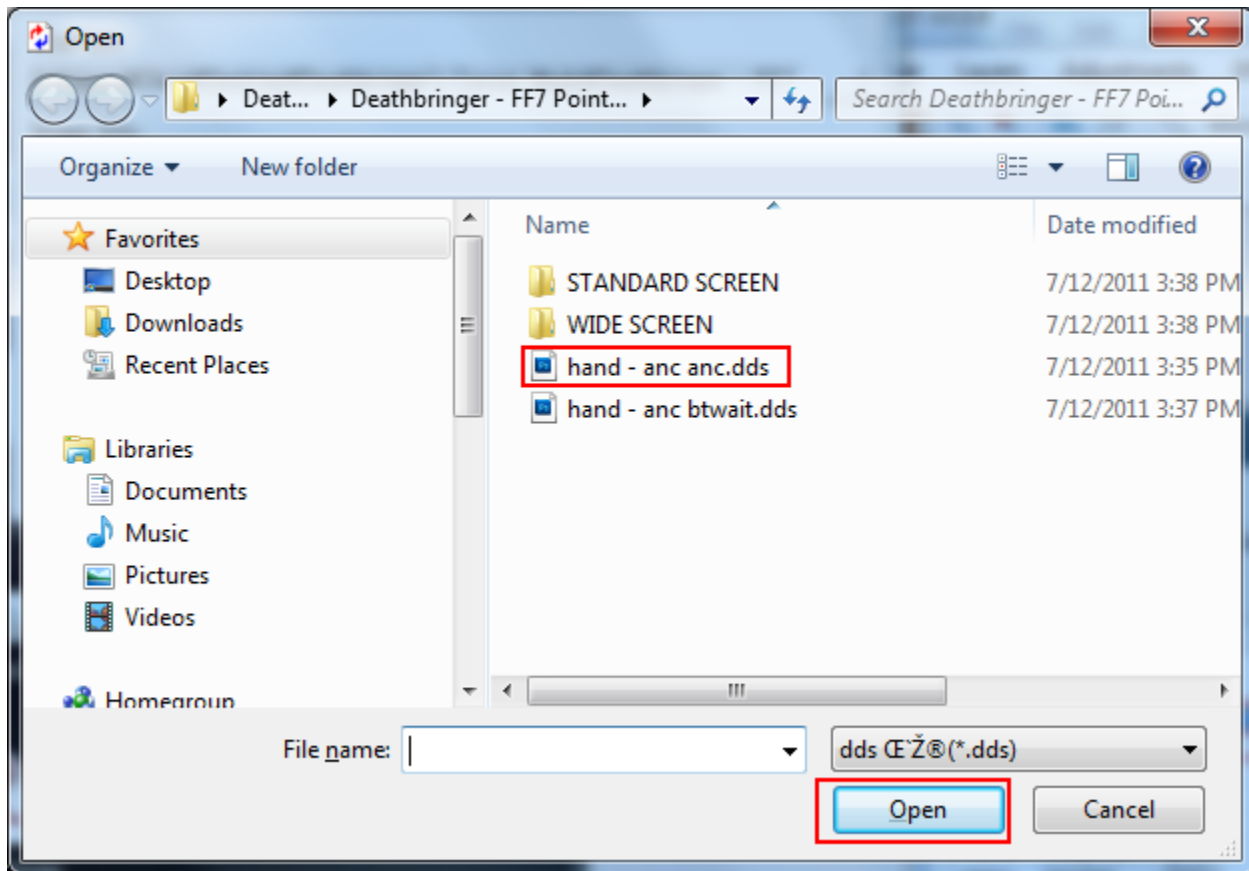

Step 2: Locate the DAT file you would like to modify and open it using ChangeTex.

- Japanese Language – ROM\91\15.DAT
- English Language – ROM\119\51.DAT
- French Language – ROM\176\75.DAT
- German Language – ROM\178\14.DAT

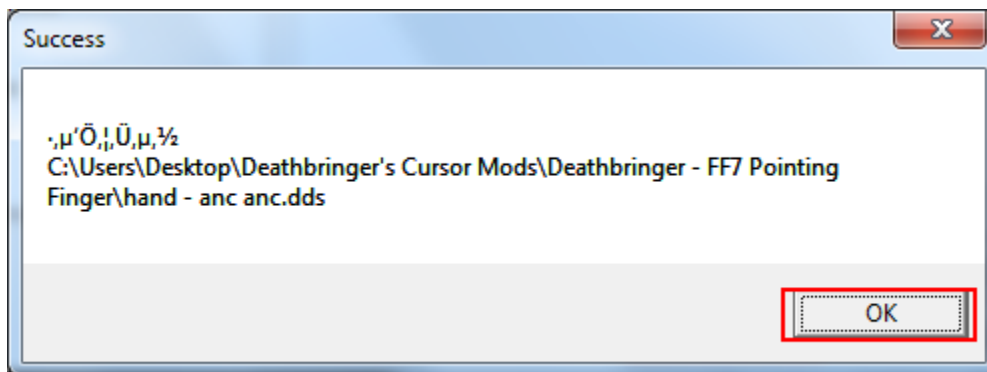

Step 3: Scroll down the list of DDS files inside the DAT until you find the “anc anc” and the “anc btwait” components. “anc anc” is the active pointer file. “anc btwait” is the sub target pointer. Click on the “anc anc” line and then click the “????” button. It will open a new window.

Step 4: *Locate the DDS file you would like to inject into the DAT and click “open.”*

Step 5: *Click “OK” Congrats. You’ve successfully patched your DAT file.*

Step 6: *Repeat Steps 3 and 4 to edit the “anc btwait” component. You can now close ChangeTex.*
